

INDEX TO
THE APPALACHIAN-OZARKIAN ELEMENT IN THE MOSS
FLORA OF MEXICO WITH A CHECK-LIST OF ALL
KNOWN MEXICAN MOSSES

Howard Alvin Crum

Doctoral Dissertation

University of Michigan

1951

The bryologist working on Mexican bryophytes may have discovered that looking for a species in this piece of work is a slow and tedious routine.

This index has been prepared to provide the user with a more convenient reference to the species known from Mexico until 1951. No effort has been made, though, to insert geographic or other names because of the length of the manuscript. This would also make it more difficult to find names of taxa. Only scientific names have been indexed.

In order to get full advantage of this index, the reader should be familiar with the symbols used here. These are as follows:

Species cited in the check-list, i.e.
 valid species..... 000
Synonyms in the check-list.....(000)
Species distribution map..... 000*
Citation to specimens examined....."000"
Excluded species..... 000e
Synonyms in list of excluded species..(000)e

The page numbers without any symbol are those names cited occasionally in the text.
